

RAPTOOL CDS

Cloud Data storage

Centralize data collected from your mobile devices

CDS or Raptool Cloud Data Storage is made for companies that need a mobile solution and somewhere to store the data. It can be an add-on to your existing systems or work as a separate system. You can see it as a web-based excel-sheet.

Reporting, importing and exporting

In the web-interface you set up your databases. Decide how many columns you want and what data they should contain. Populate your database through the web-interface, import a database, integrate to your existing systems through web-services or use your Raptool mobile application to populate the database. All your mobile devices can now access and change the data through your Raptool application. In the web interface you can create reports, change bulk data and search for data. The CDS-web interface can be accessed from your PC, Mac, iPhone or android devices.

Mobile solution

In the Raptool Designer you build applications for mobile devices in a graphical interface. No programming skills are required and it is much faster than traditional programming. The mobile applications send and receive data from CDS and any other systems you have.

RAPTOOL CDS Examples

Warehouse management

Quantity in multiple stock locations, multiple warehouses, serial number, batch number, bin no, 3PL, manage multiple customers.

Maintenance check, service

Fire prevention, janitor, cleaning services... Set up barcodes for control areas.

Set your own colors

In the warehouse the mobile devices are used to pick orders, change stock locations (warehouse move), count inventory etc. When you want to order you can either check stock levels and send orders from the web-interface or you can scan barcodes in the warehouse and create an order from that.
